

Zen Technologies unveils ShootEdge

Zen Technologies, a pioneer in simulation technology has unveiled a weapon system that encases a pistol, revolver or small sized handgun and allows firing from an angle. ShootEdge enables shooting at the adversary without risk of exposure to retaliatory fire and enables the shooter to get behind a protective cover and shoot for effect. These systems are necessary and are force multipliers in encounters with terrorists and insurgents in wide ranging situations from close combat in built up areas to hostage situations. ShootEdge can be used for aimed shooting, besides shooting from

the hip both during day and night it comes with a camera and standard sight. Often, in close combat with a well-trained adversary, there is little or negligible ability to predict the outcome. ShootEdge changes the odds remarkably.
